Campari Group Press Release Malware attack: update on IT systems recovery

Milan, November 9th, 2020-Following the previous communications on the malware attack, Campari Group informs that, in the context of its IT systems recovery plan, selected services have been progressively resumed following their successful sanitization and the installation of extra security measures.

Meanwhile, a number of IT systems remain temporarily and deliberately either suspended or operating with limited functionality across multiple sites, awaiting their sanitization or rebuild in order to resume all systems in a fully secure way.

Our focus is on ensuring to the largest extent possible business continuity for our operations, customers and partners. As such, business continuity plans are being rolled out by order of priority with the objective of restoring operations in the fastest, yet most prudent fashion, in order to avoid any reoccurrences.

We are permanently monitoring the situation to assess and minimize the recovery time. Hence, as a result of this longer than initially envisaged recovery phase, we expect this situation to have some temporary effect on the Group's financial performance. We shall continue to provide further updates in a timely manner.
